

Updating the firmware of the projector

Update the operating program of the projector, when using this module.

To our customers,

In order to support the new input modules (options) available for purchase after the market release of the projector, the projector's firmware (operating program) is updated as and when necessary. If the number of the firmware version (ROM version) is under 3.00, the input module will not operate properly. Therefore, before attempting to use the module, check the model name of the module and the number of the projector's firmware version, and consult your dealer or a Panasonic sales company representative.

- For information on the firmware version number (ROM version) of the projector, see "System Information" section in the projector operating instructions.

Confirming firmware version number (ROM version)

- ① Press the MENU button.
 - The MENU screen will be displayed.
- ② Press the ▲ ▼ buttons to select OPTION.
- ③ Press the ENTER button.
 - The OPTION screen will be displayed.
- ④ Press the ▲ ▼ buttons to select SYSTEM INFORMATION.
- ⑤ Press the ENTER button.
 - The SYSTEM INFORMATION screen will be displayed.

Firmware version number
